

# **Lecture 2**

# **Introduction to Microcontrollers**

# Microcontrollers

- Microcontroller
  - CPU + ++++++
- Microprocessor
  - CPU (on single chip)

# What is a Microcontroller

- Integrated chip that typically contains integrated CPU, memory (RAM ROM), I/O ports on a single Chip.
- System on a single Chip/ small computer on a single chip
- Designed to execute a specific task to control a single system
- Smaller & Specified (design cost)
- Differs from Microprocessor
  - general-purpose chip
  - Used to design multi purpose computers or devices
  - Require Multiple chips to handle various tasks
- Typically Microcontroller embedded inside some device
- Microcontrollers are important part of Embedded systems

# What is a Development Board

- A printed circuit board designed to facilitate work with a particular microcontroller.
- Typical components include:
  - power circuit
  - programming interface
  - basic input; usually buttons and LEDs
  - I/O pins

# The Arduino Development Board

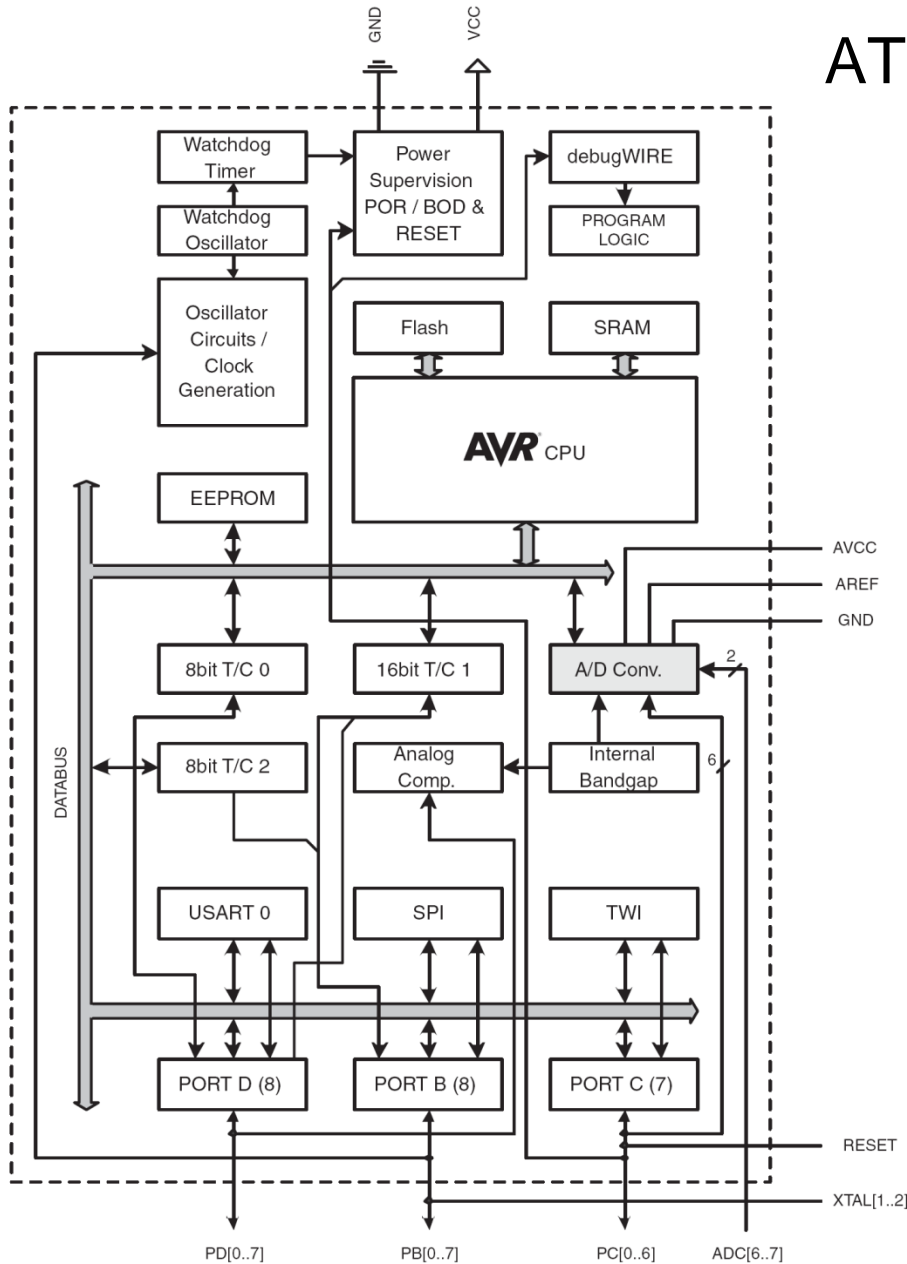

**Arduino** (The name is an Italian , meaning "strong friend") is an open-source platform used for building electronics projects. Arduino consists of both a physical programmable circuit board (often referred to as a microcontroller) and a piece of software, or IDE (Integrated Development Environment) that runs on your computer, used to write and upload computer code to the physical board.

# Arduino Microcontroller Boards

<b>Microcontroller</b>	ATmega328
<b>Operating Voltage</b>	5 V
<b>Input Voltage (recommended)</b>	7-12 V
<b>Input Voltage (limits)</b>	6-20 V
<b>Digital I/O Pins</b>	14 (of which 6 provide PWM output)
<b>Analog Input Pins</b>	6
<b>DC Current per I/O Pin</b>	40 mA
<b>DC Current for 3.3V Pin</b>	50 mA
<b>Flash Memory</b>	32 KB (ATmega328) of which 2 KB used by bootloader
<b>SRAM</b>	2 KB (ATmega328)
<b>EEPROM</b>	1 KB (ATmega328)
<b>Clock Speed</b>	16 MHz

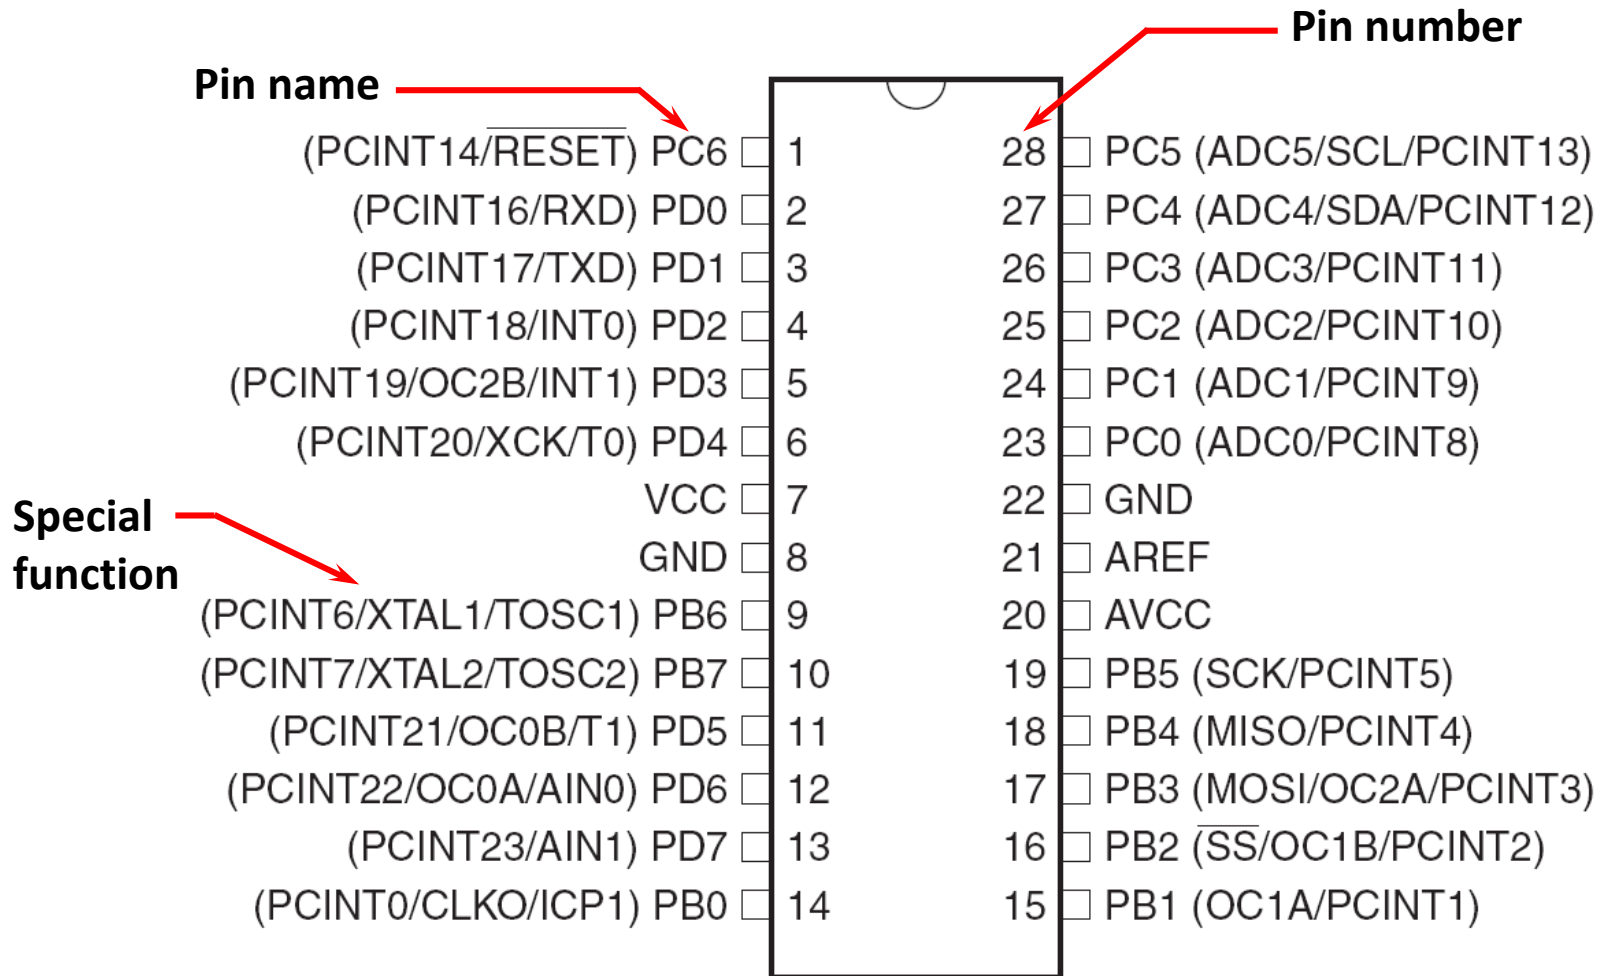

# ATmega328 Internal Architecture

(PCINT14/RESET) PC6	1	28	PC5 (ADC5/SCL/PCINT13)
(PCINT16/RXD) PD0	2	27	PC4 (ADC4/SDA/PCINT12)
(PCINT17/TXD) PD1	3	26	PC3 (ADC3/PCINT11)
(PCINT18/INT0) PD2	4	25	PC2 (ADC2/PCINT10)
(PCINT19/OC2B/INT1) PD3	5	24	PC1 (ADC1/PCINT9)
(PCINT20/XCK/T0) PD4	6	23	PC0 (ADC0/PCINT8)
VCC	7	22	GND
GND	8	21	AREF
PCINT6/XTAL1/TOSC1) PB6	9	20	AVCC
PCINT7/XTAL2/TOSC2) PB7	10	19	PB5 (SCK/PCINT5)
(PCINT21/OC0B/T1) PD5	11	18	PB4 (MISO/PCINT4)
(PCINT22/OC0A/AIN0) PD6	12	17	PB3 (MOSI/OC2A/PCINT3)
(PCINT23/AIN1) PD7	13	16	PB2 (SS/OC1B/PCINT2)
(PCINT0/CLKO/ICP1) PB0	14	15	PB1 (OC1A/PCINT1)

# ATmega328 Microcontroller

# Microcontroller Ports and Pins

- The communication channels through which information flows into or out of the microcontroller

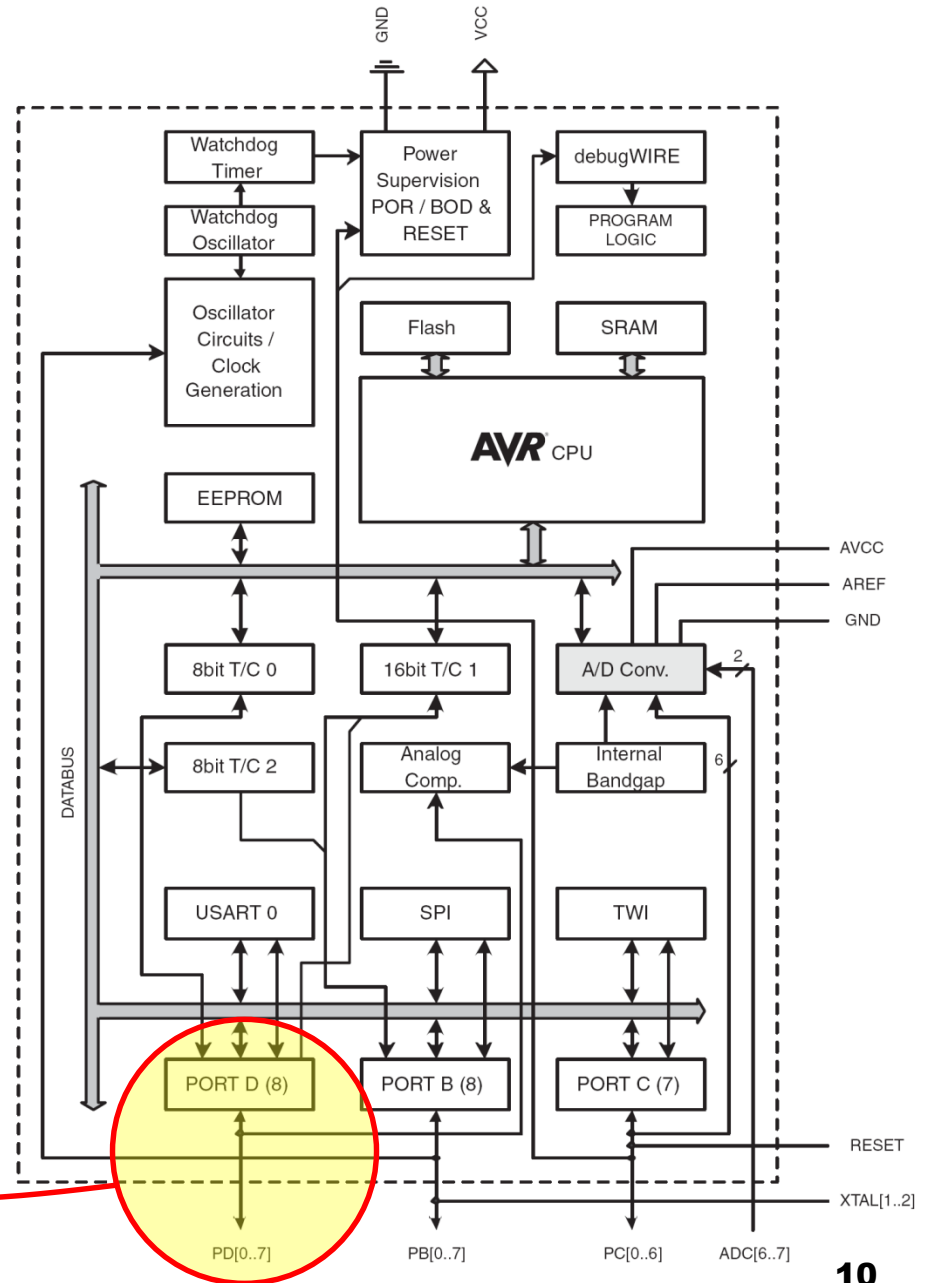

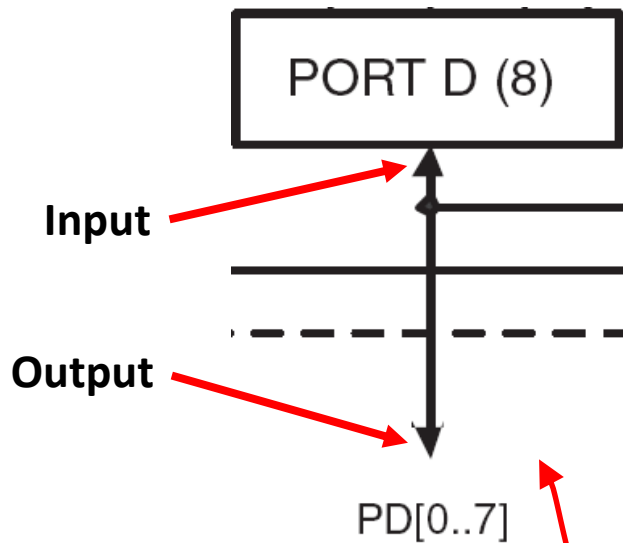

- Ex. PORTB

- Pins PB0 – PB7

- May not be contiguous
- Often bi-directional

# ATmega328 Block Diagram

# Setting the Pin Data Direction

## ■ Arduino

- `pinMode(pin_no., dir)`

- Ex. Make Arduino pin 3 (PD3) an *output*

- `pinMode(3, OUTPUT);`

- Note: one pin at a time

- Suppose you wanted Arduino pins 3, 5, and 7 (PD3, PD5, and PD7) to be outputs?

- Is there a way to make them all outputs at the same time?

- Yes! Answer coming later...

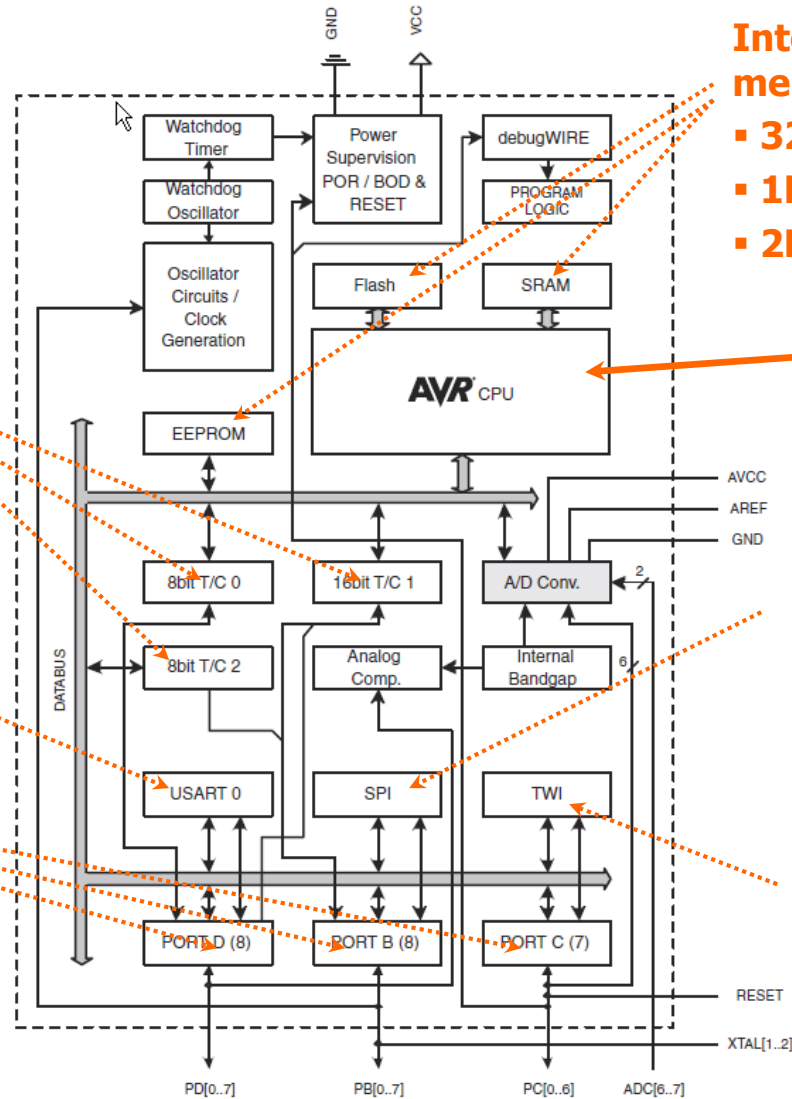

# Atmega328 Overview

Timer/Counter

Universal Synchronous and Asynchronous serial Receiver and Transmitter (Serial)

GPIO

Internal memories

- 32KB Flash
- 1KB EEPROM
- 2KB SRAM

8-bit CPU

Serial Peripheral Interface

2-wire Serial Interface

# AVR Microcontroller

## *AVR stand for?*

- **A**dvanced **V**irtual **R**ISC,  
the founders are **A**lf Egil Bogen **V**egard Wollan **R**ISC
- AVR architecture was conceived by two students at **N**orwegian **I**nstitute of **T**echnology (NTH) and further refined and developed at **A**tmel **N**orway (Atmel AVR).

# AVR Microcontroller

- AVR Micro controllers is Family of RISC Microcontrollers from Atmel.
- There are multiple architectures

RISC (Reduced Instruction Set Computer)

CISC (Complex Instruction Set Computer)

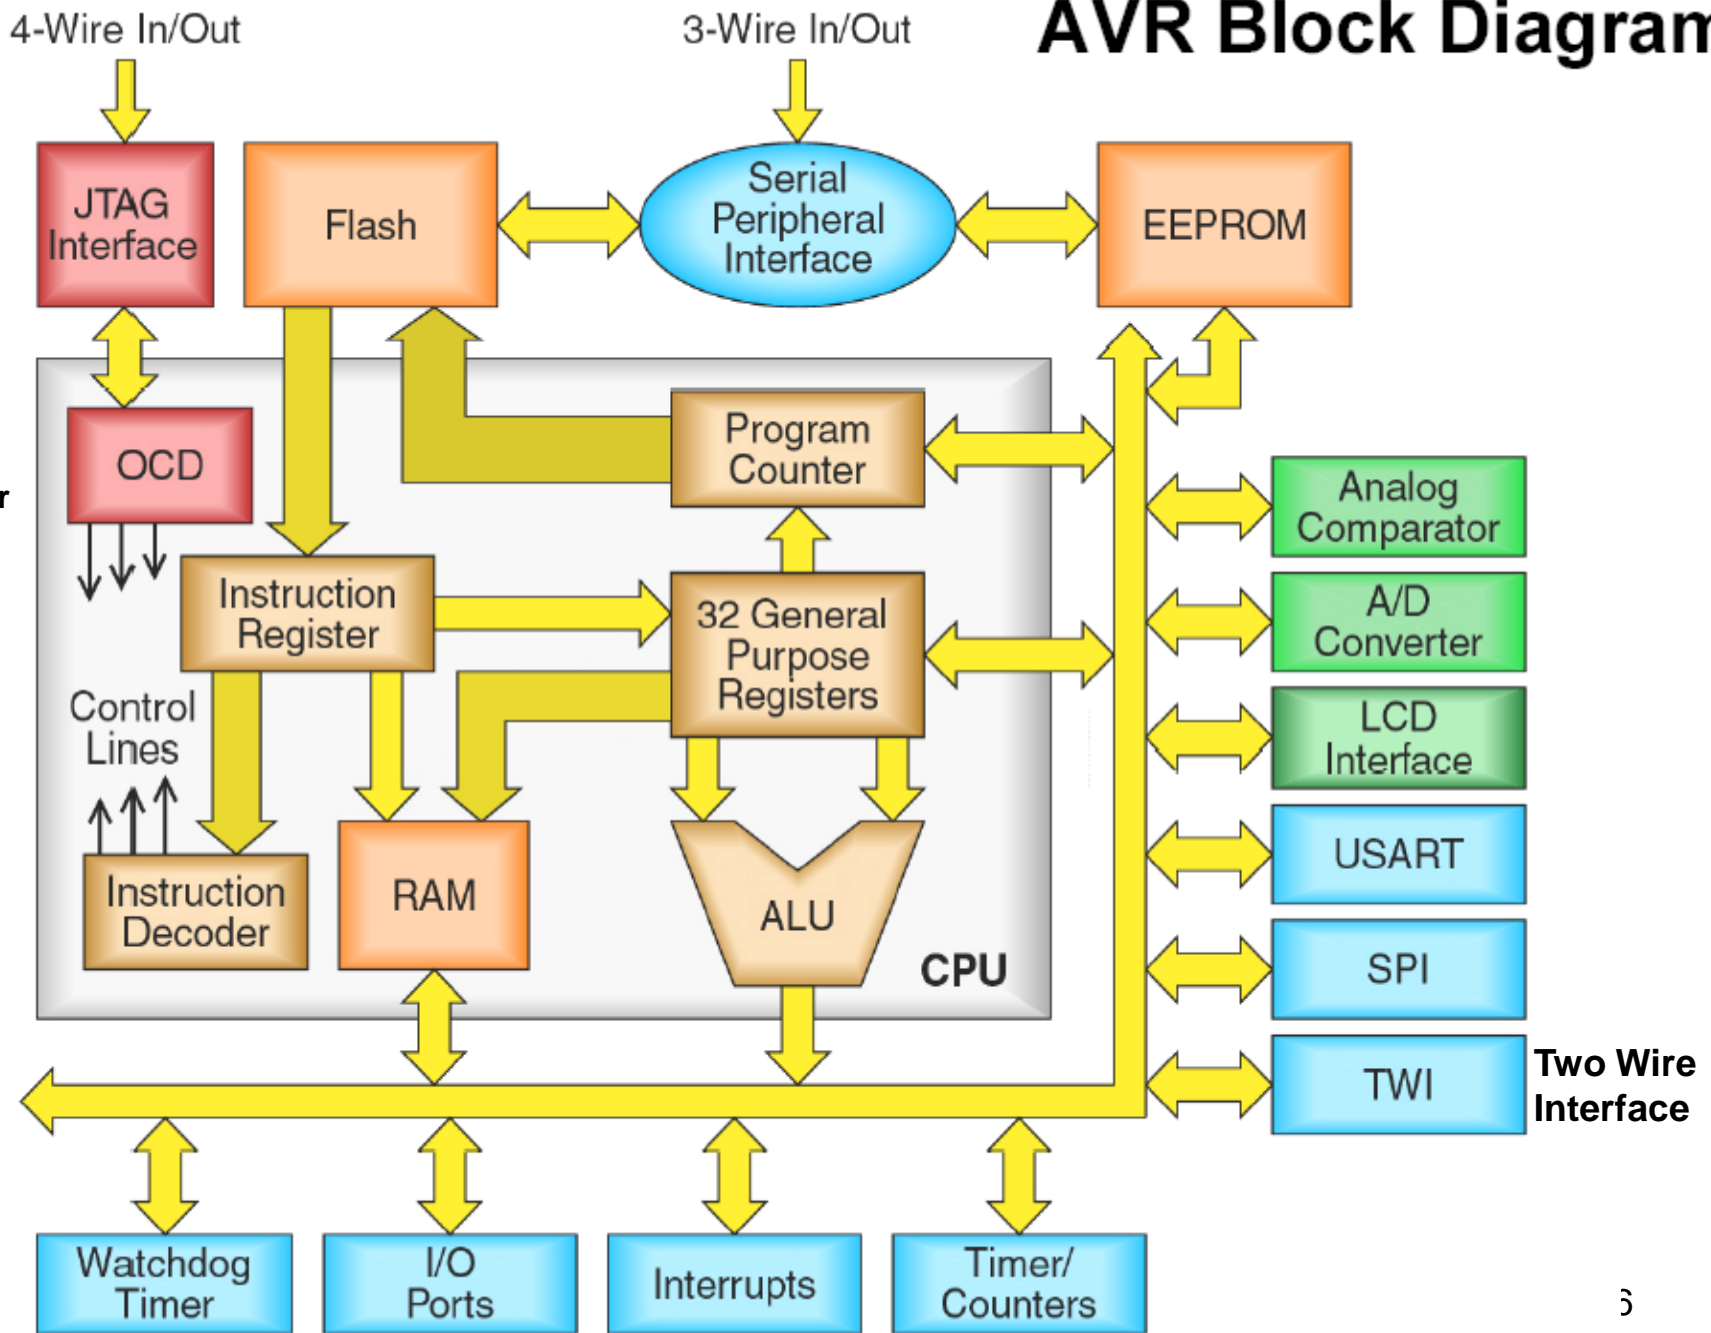

# RISC Microcontroller

## Reduced Instruction Set Computers Advantages

- Fast Execution of Instructions due to simple instructions for CPU.
- RISC chips require fewer transistors, which makes them cheaper to design and produce.
- Emphasis on software
- Single-clock , reduced instruction only
- Register to register: "LOAD" and "STORE" are independent instructions
- Spends more transistors on memory registers

# AVR Block Diagram

On Chip Debugger

# AVR Microcontroller

The AVR is a Harvard architecture CPU.

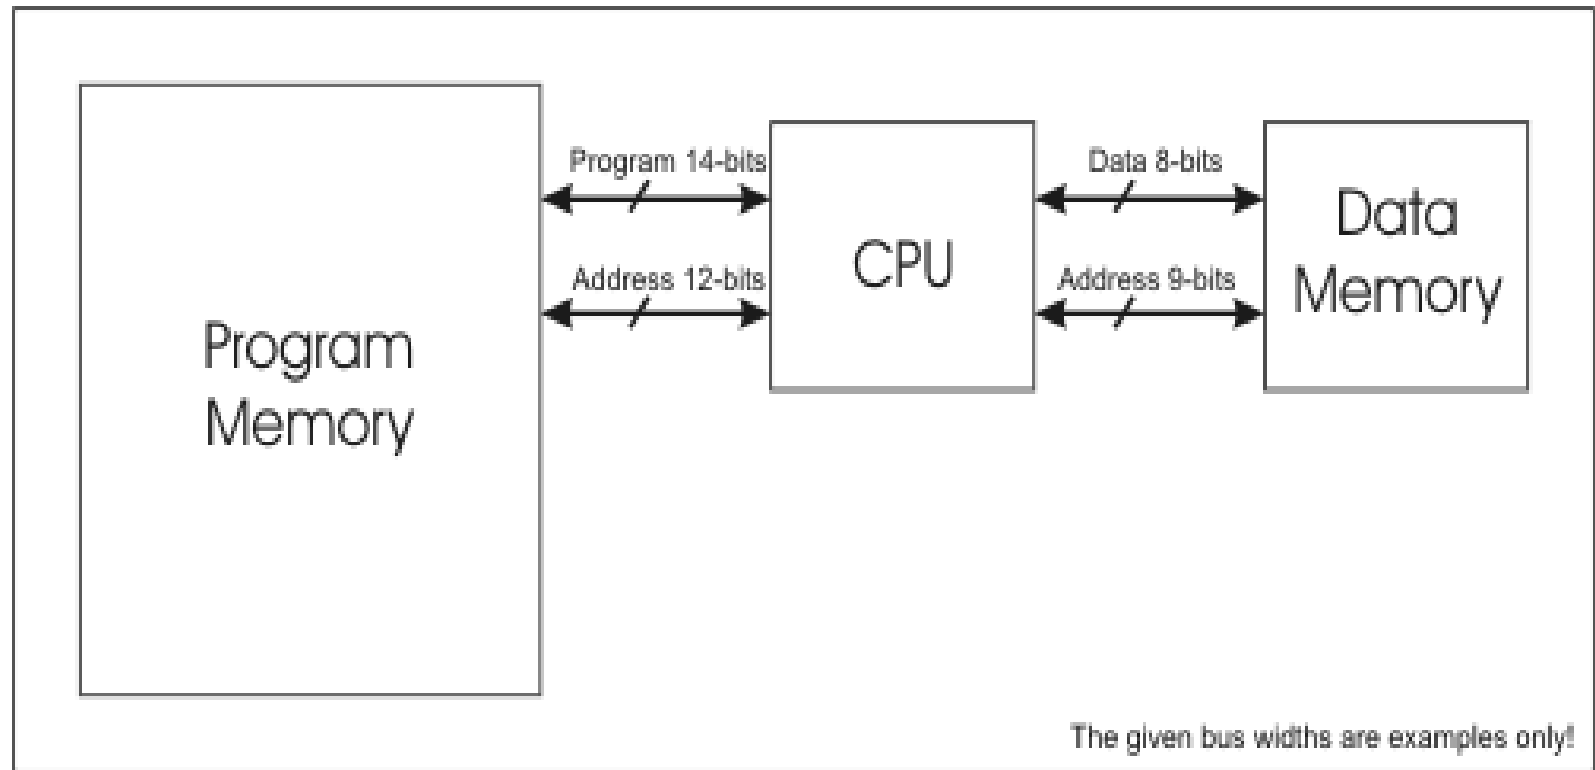

## ➤ *Harvard Architecture*

- Computer architectures that used physically separate **storage** and **signal pathways** for their instructions and data.
- CPU can read both an **instruction** and **data** from memory at the same time that makes it faster.

## ➤ *von Neumann architecture*

- CPU can Read an instruction or data from/to the memory.
- Read, Write can't occur at the same time due to same memory and signal pathway for data and instructions.

# AVR Microcontroller

***Harvard Architecture diagram***

# AVR Microcontroller

- AVR is a family of 8-bit microcontrollers with a large range of variants differing in:
  - size of program-memory (flash)
  - size of EEPROM memory
  - number of I/O pins
  - number of on-chip features such as UART and ADC
- Smallest microcontroller is the **ATTiny11** with **1k flash ROM**, **no RAM** and **6 I/O pins**.
- Large such as the **ATMEGA128** with **128k flash**, **4KB RAM**, **53 I/O pins** and lots of on-chip features.

Part Number	Pins	Flash	EEPROM	RAM
90S1200	20	1K	64 Bytes	0
90S2313	20	2K	128	128
90S2323	8	2K	128	128
90S2333	28	2K	128	128
90S4433	28	4K	256	128
90S4414	40	4K	256	256
90S8515	40	8K	512	512
90S4434	40	4K	256	256
90S2343	8	2K	128	128
Mega103	64	128K	4096	4096
Mega603	64	64K	2048	4096
Tiny10	8	1K	64	0
Tiny12	8	1K	64	0
Tiny13	8	2K	128	128

# ***AVR Architecture***

- **Registers**
- **Instruction Set**
- **I/O ports**
- **Memory (flash & RAM & ROM)**
- **CPU**

# ***AVR Architecture***

- **Registers: Two types of registers**  
**GERNEL purpose & SPECIAL purpose registers**
- **GERNEL purpose**
  - 32 general purpose** registers having storage capacity of 8-Bits
  - Named as **R0,R1,R2** to **R31**.
  - Register 0 to 15 & 16 to 31 are different.
  - Can store both Data & Addresses.
- **SPECIAL purpose: Three registers**
  - Program counter
  - Stack Pointer
  - Status Register

# AVR Memory Space

- Program Flash
  - Vectors, Code, and (Unchangeable) Constant Data
- Working Registers
  - Includes X, Y, and Z registers.
- I/O Register Space
  - Includes “named” registers
- SRAM – Data Space
  - Runtime Variables and Data
  - Stack space
- EEPROM space
  - For non-volatile but alterable data

## AVR Register File

# AVR Architecture

## Pointer Register

Three 16-bit address registers pairs of registers 26 to 31 have extra meaning in AVR assembly.  
X (r27:r26), y (r29:r28), z (r31:r30).

pointer	Sequence
X	Read/Write from address X, don't change the pointer

# *AVR Architecture*

## status register

(SREG) It is 8-bit long each bit has a different meaning.

I: Global Interrupt Enable/Disable Flag, SREG7

T: Transfer bit used by BLD and BST instructions, SREG6

H: Half Carry Flag, SREG5

S: For signed tests Instruction Set, SREG4

V: Two's complement overflow indicator, SREG3

N: Negative Flag, SREG2

Z: Zero Flag, SREG1

C: Carry Flag, SREG0

# ***AVR Architecture***

## ***Stack Pointer (SP)***

***16-bit stack pointer (SP) holds address in data space of area to save function call information.***

# AVR

## Register Architecture

	7	0	Addr.	
General Purpose Working Registers	R0		\$00	
	R1		\$01	
	R2		\$02	
	...			
	R13		\$0D	
	R14		\$0E	
	R15		\$0F	
	R16		\$10	
	R17		\$11	
	...			
	R26		\$1A	X-register Low Byte
	R27		\$1B	X-register High Byte
	R28		\$1C	Y-register Low Byte
	R29		\$1D	Y-register High Byte
	R30		\$1E	Z-register Low Byte
	R31		\$1F	Z-register High Byte

# AVR Architecture

## Memory:

There are two separate memories

**Program Memory**  
**Data Memory**

# ***AVR Studio***

- **Integrated Development Environment (IDE)** for writing and debugging AVR applications for windows environments.
- AVR Studio provides a **project management tool, source file editor, chip simulator and In-circuit emulator interface** for the powerful AVR 8-bit RISC family of microcontrollers.
