What is Arduino?

The hardware

The development environment

```
Arduino - 0010 Alpha

treadSensorInTest

int value = 0;
int timeout = 5000;
int startLine = 0;
int resultArr[5];
int arrPtr = 0;

void setup() // run once, when the sketch starts
{
  for (int i=2; i<4; i++)
  {
    pinMode(i, INPUT); // set 'pin' i to input
    digitalWrite(i, HIGH);
  }

  for (int y=0; y < 5; y++)
  {
    resultArr[y] = 0;
  }

  Serial.begin(9600); // connect to the serial port
  Serial.println("ready for data entry"); // print readiness message to serial monitor for user
  Serial.flush();
}

void loop() // run over and over again
{
  // startLine = millis();
  // while (millis() - startLine < timeout)
  // {
  //
  //   arrPtr = 0;
  //   for (int i=2; i<4; i++)
  //   {
  //     resultArr[arrPtr] = digitalRead(i);
  //     arrPtr++;
  //   }
  // }

Done compiling.

Binary sketch size: 2652 bytes (of a 14336 byte maximum)
```

XPort to Twitter

The screenshot shows a Twitter profile for 'sageplant1'. At the top, there's a search bar with 'Name or location' and a 'search' button, along with links for 'Login / Join Twitter!' and a language selector. The profile header includes the Twitter logo, a small bird icon, and a yellow banner that says 'Hey there! sageplant1 is using Twitter.' with a 'Join today!' button. Below the banner, there's a bio: 'Twitter is a free service that lets you keep in touch with people using the web, your phone, or IM. Join today to start receiving sageplant1's updates.' The profile picture shows a potted plant. The main content area displays a tweet: 'URGENT! Water me!' posted 2 days ago from the web. The tweet text reads: 'You didn't water me enough 09:57 PM June 15, 2008 from web' followed by 'URGENT! Water me! 09:41 PM June 15, 2008 from web' and 'You didn't water me enough 11:13 PM June 14, 2008 from web'. There are 'RSS' and 'Older »' buttons. On the right, an 'About' section lists: Name: sageplant1, Location: Limerick, Ireland, Web: http://braz.blogs..., Bio: I'm a Sage Plant that twitters. A 'Stats' section shows: Following: 0, Followers: 0, Favorites: 0, Updates: 4. technology conference

OpenSpime

Spimes - An Internet of Things

Programming

★ Write program

★ Compile (check for errors)

★ Reset board

★ Upload to board

An Arduino “Sketch”

Global Variables

setup()

loop()

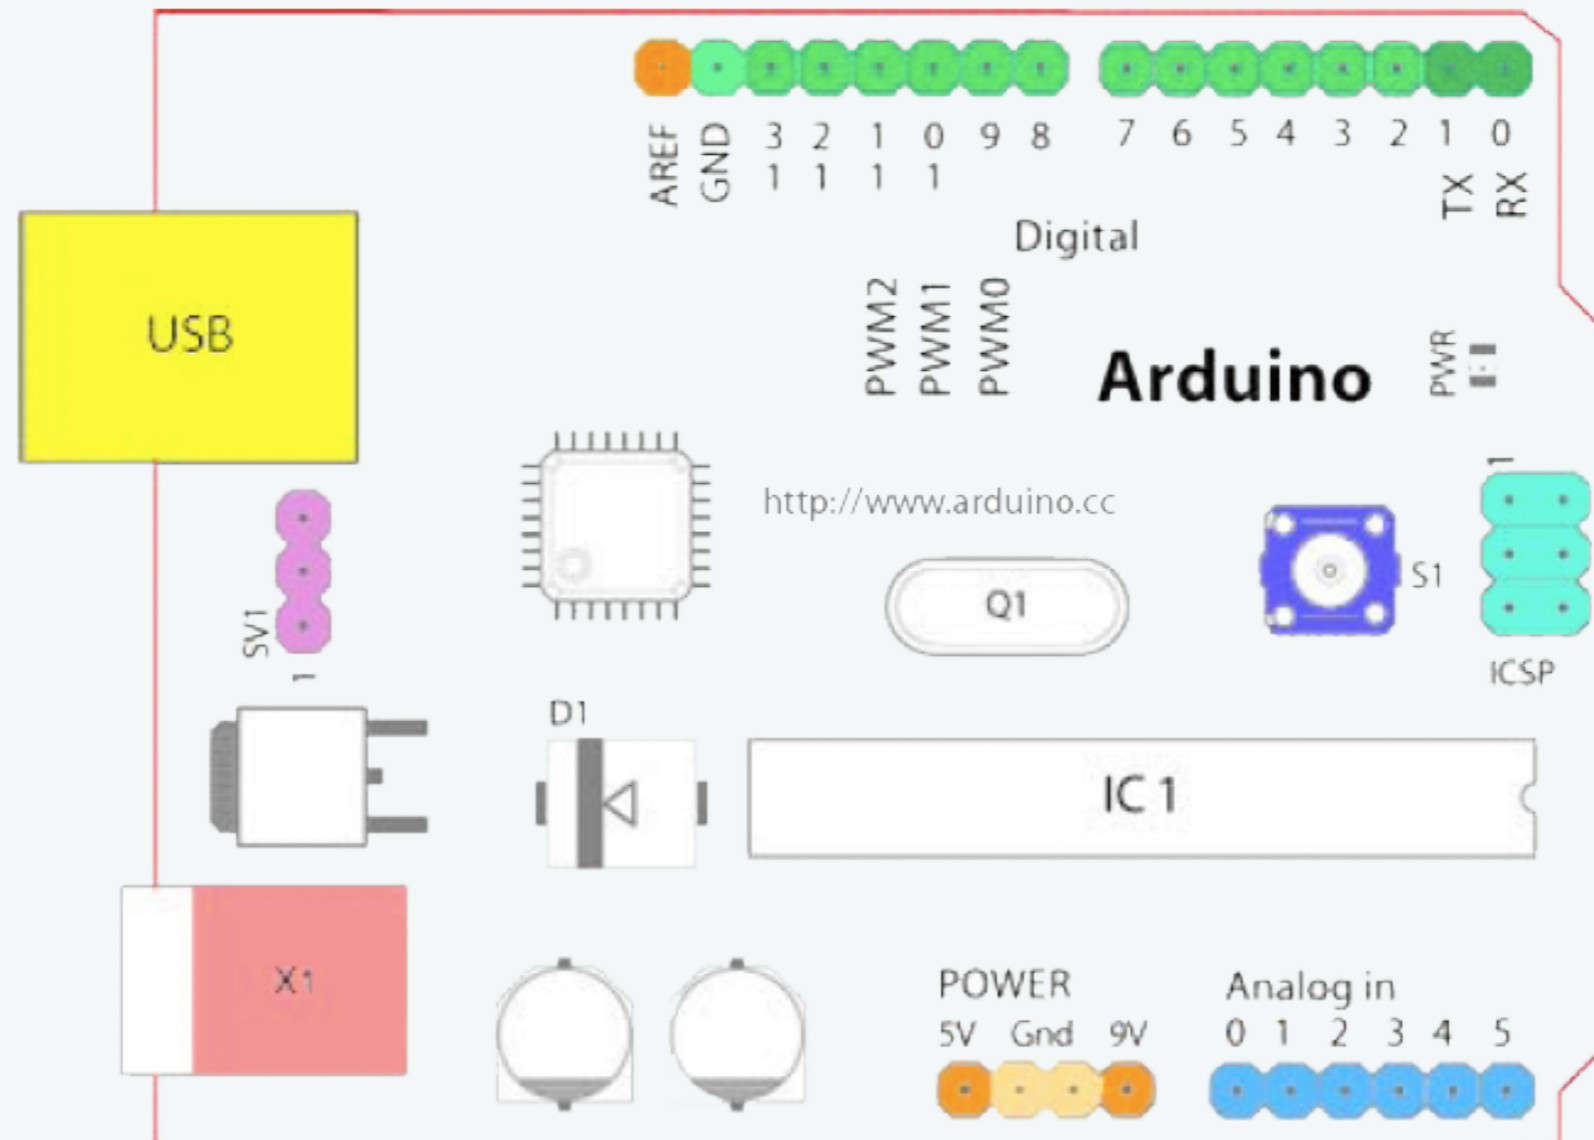

★ pinMode()

★ digitalWrite() / digitalRead()

★ analogRead() / analogWrite()

★ delay()

★ millis()

- ★ 14 *Digital IO* (pins 0 - 13)
- ★ 6 *Analog In* (pins 0 - 5)
- ★ 6 *Analog Out* (pins 3, 5, 6, 9, 10, 11)

Hello World!

```
void setup()
{
  // start serial port at 9600 bps:
  Serial.begin(9600);
}

void loop()
{
  Serial.print("Hello World!\n\r");
  // wait 2sec for next reading:
  delay(2000);
}
```

- ★ Install latest Arduino IDE from arduino.cc
- ★ Run Arduino IDE
- ★ Write the code on the left into the editor
- ★ Compile / Verify the code by clicking the play button
- ★ Before uploading your sketch, check the board and the serial port are correct for your Arduino and for your computer
 - Menu -> Tools -> Board
 - Menu -> Tools -> Serial Port
- ★ Upload the code from the computer to the Arduino using the upload button

Blinking LED

```
/* Blinking LED ---
 * turns on and off a light emitting diode(LED) connected to a digital
 * pin, based on data coming over serial
 */

int ledPin = 13; // LED connected to digital pin 13
int inByte = 0;

void setup()
{
    pinMode(ledPin, OUTPUT); // sets the digital pin as output
    Serial.begin(19200); // initiate serial communication
}

void loop()
{
    while (Serial.available()>0) {
        inByte = Serial.read();
    }
    if (inByte>0) {
        digitalWrite(ledPin, HIGH); // sets the LED on
    } else {
        digitalWrite(ledPin, LOW); // sets the LED off
    }
}
```

```
/* Blinking LED ---  
* turns on and off a light emitting diode(LED) connected to a digital  
* pin, based on data coming over serial  
*/
```

```
int ledPin = 13; // LED connected to digital pin 13  
int inByte = 0;
```

```
void setup()  
{  
    pinMode(ledPin, OUTPUT); // sets the digital pin as output  
    Serial.begin(19200); // initiate serial communication  
}
```

```
void loop()  
{  
    while (Serial.available() > 0) {  
        inByte = Serial.read();  
    }  
    if (inByte > 0) {  
        digitalWrite(ledPin, HIGH); // sets the LED on  
    } else {  
        digitalWrite(ledPin, LOW); // sets the LED off  
    }  
}
```

Initialise
some of the
variables

```
/* Blinking LED ---  
* turns on and off a light emitting diode(LED) connected to a digital  
* pin, based on data coming over serial  
*/
```

```
int ledPin = 13; // LED connected to digital pin 13  
int inByte = 0;
```

```
void setup()  
{  
    pinMode(ledPin, OUTPUT); // sets the digital pin as output  
    Serial.begin(19200); // initiate serial communication  
}
```

```
void loop()  
{  
    while (Serial.available()>0) {  
        inByte = Serial.read();  
    }  
    if (inByte>0) {  
        digitalWrite(ledPin, HIGH); // sets the LED on  
    } else {  
        digitalWrite(ledPin, LOW); // sets the LED off  
    }  
}
```

Setup LED pin and serial connection

Blinking LED

```
/* Blinking LED ---  
* turns on and off a light emitting diode(LED) connected to a digital  
* pin, based on data coming over serial  
*/
```

```
int ledPin = 13; // LED connected to digital pin 13  
int inByte = 0;
```

```
void setup()  
{  
    pinMode(ledPin, OUTPUT); // sets the digital pin as output  
    Serial.begin(19200); // initiate serial communication  
}
```

```
void loop()  
{  
    while (Serial.available()>0) {  
        inByte = Serial.read();  
    }  
    if (inByte>0) {  
        digitalWrite(ledPin, HIGH); // sets the LED on  
    } else {  
        digitalWrite(ledPin, LOW); // sets the LED off  
    }  
}
```

Loop - Reading the
serial for info, when
something is received
turn the LED on

Push button LED

```
/* Digital reading, turns on and off a light emitting diode (LED) connected to digital
 * pin 13, when pressing a pushbutton attached to pin 7. It illustrates the concept of
 * Active-Low, which consists in connecting buttons using a 1K to 10K pull-up resistor.
 */

int ledPin = 13; // choose the pin for the LED
int inPin = 7; // choose the input pin (button)
int buttonval = 0; // variable for reading the pin status

void setup() {
